

BellBot

A smarter, better way to greet your guests, your company employees, your business partners

It's a smart device that replaces the traditional doorbell, the lock and key and the intercom all in one neat package.

What is BellBot?

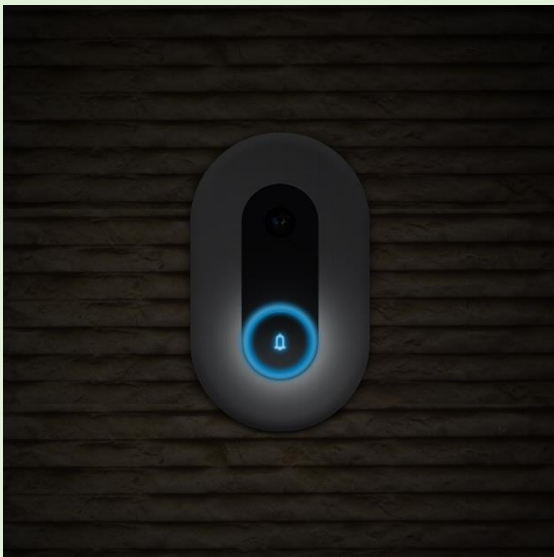

Is someone ringing at your door? Now you don't need to get up and walk all the way there. Just grab your smartphone, check who it is, talk to them or let them in, all with a few taps.

* Image in screenshot is simulated

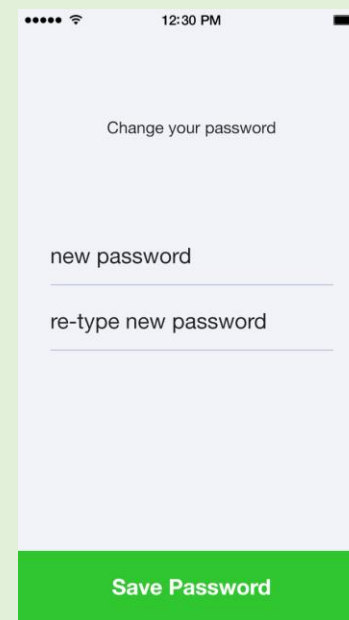

- Full HD camera for live video streaming
- WiFi, LAN, BLE connectivity
- Fingerprint reader
- Motion sensor
- Temperature and humidity sensors
- Slim and easy to add to office buildings or private houses

What else can it do?

- You can assign QR codes beforehand to your guests and have BellBot allow entry based on the codes
- Lock or unlock your door – no more searching for keys- user your finger prints
- You get deliveries at 10th flor of your company : send QR codes to delivery partners

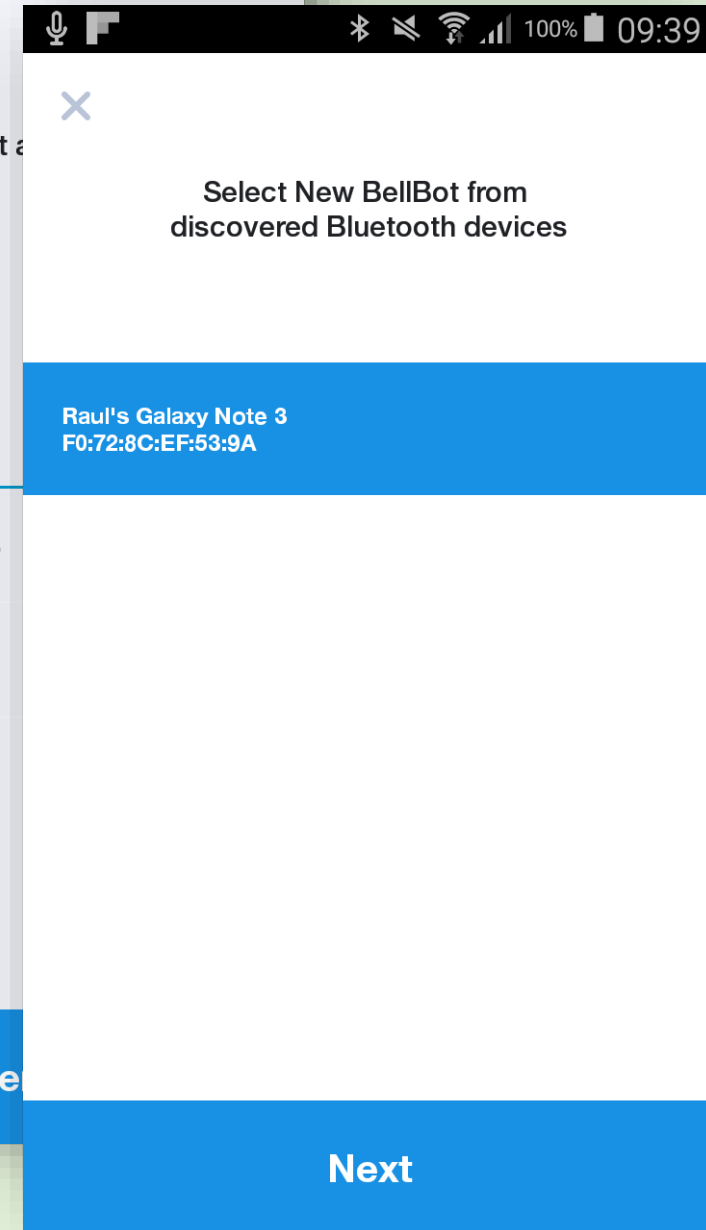

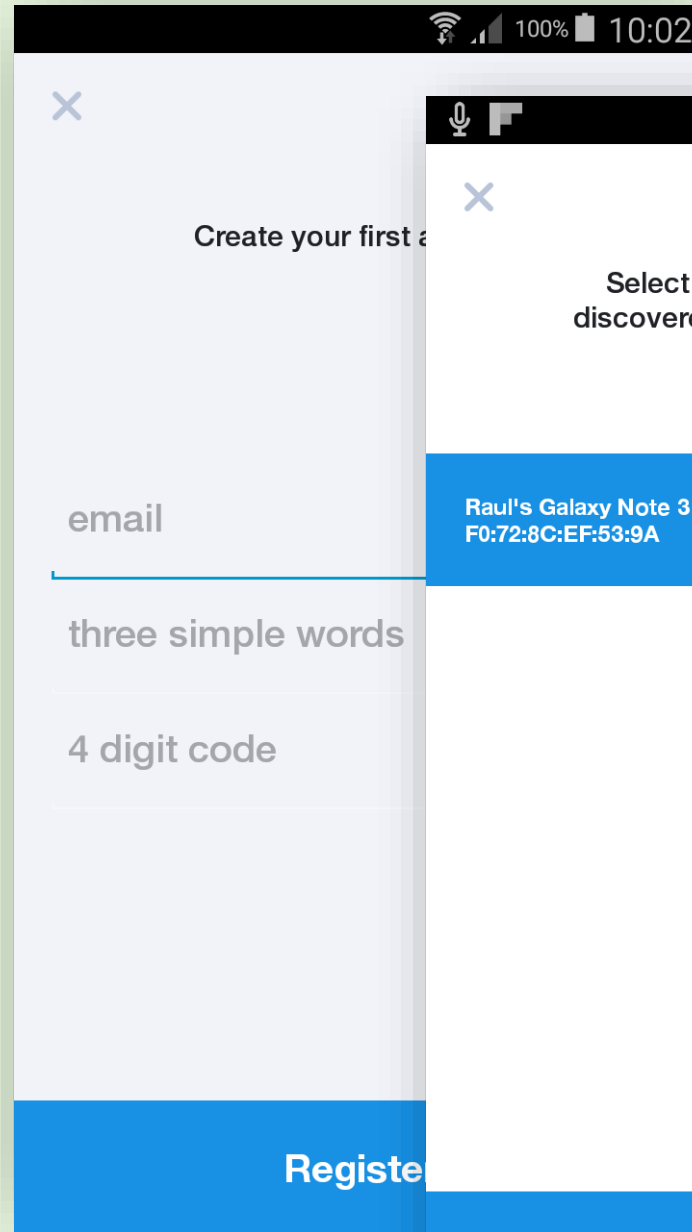

How does it work?

The first thing to do is create your account on the app.

Once logged in, connecting to the device is an easy task.

Search for BellBot via Bluetooth, select it from the list of available devices and pair it with your smartphone.

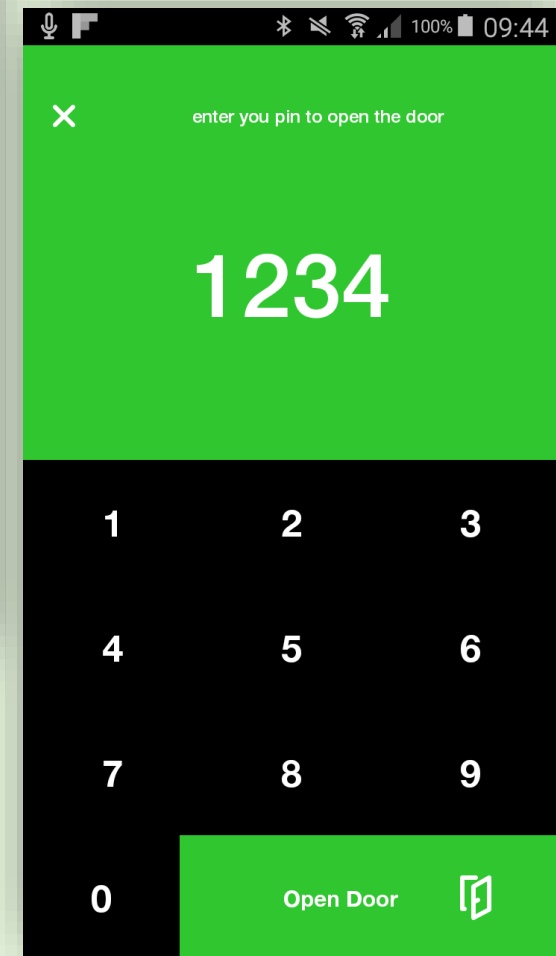

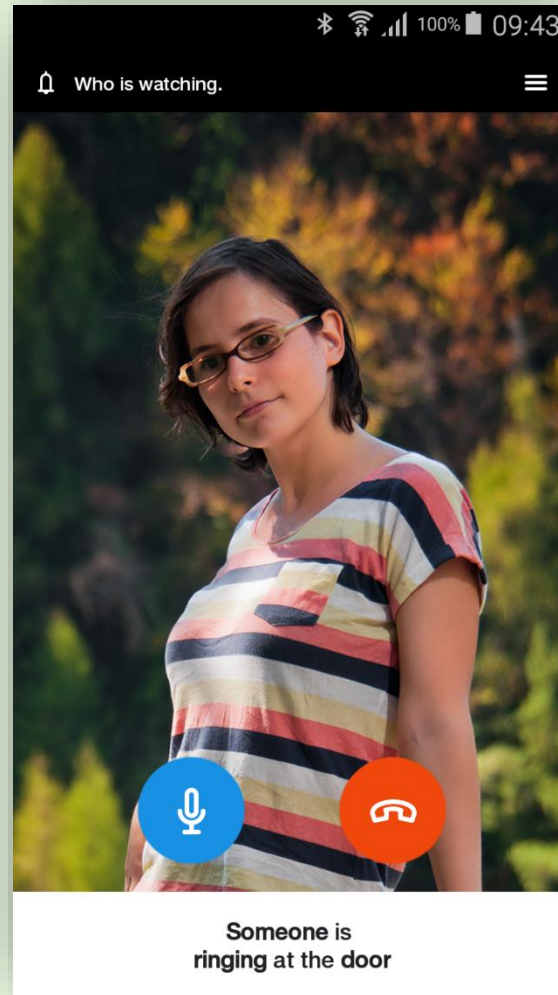

What next?

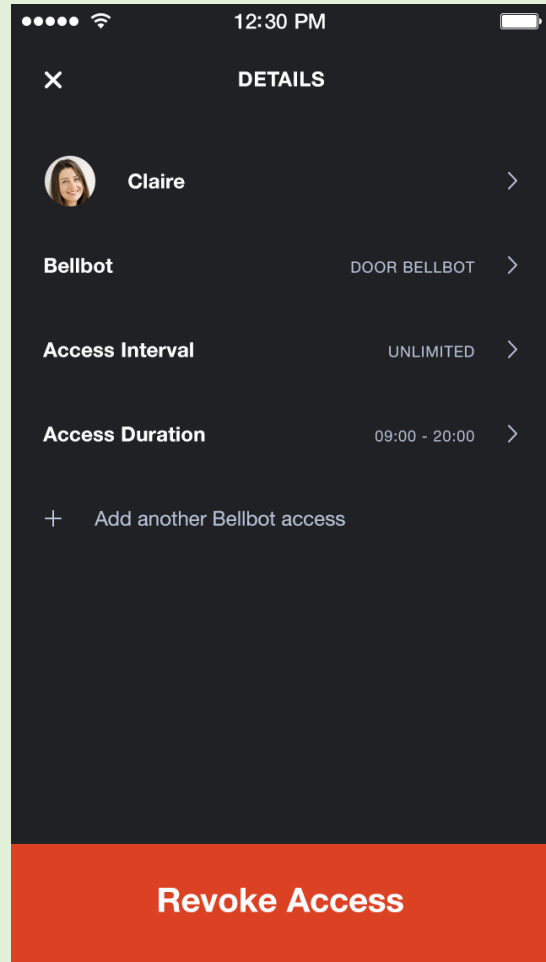

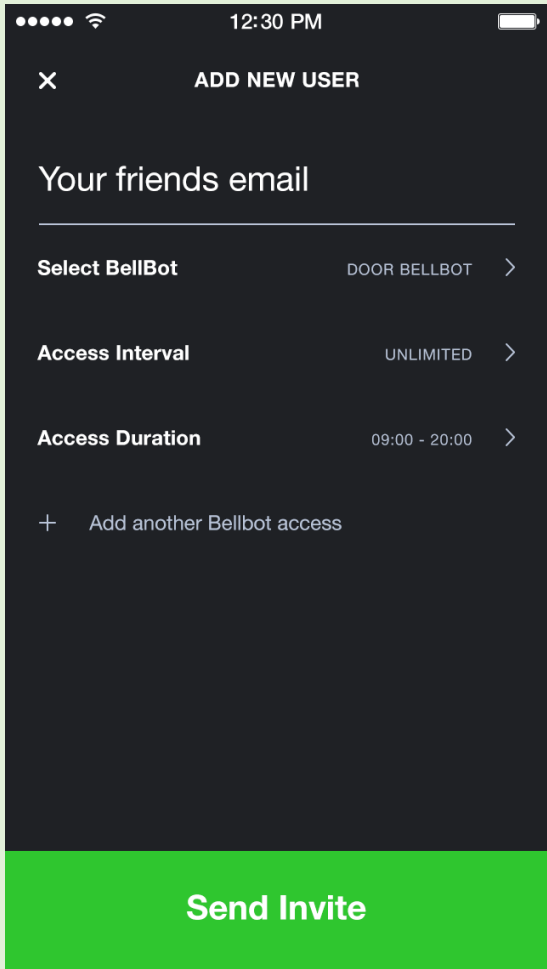

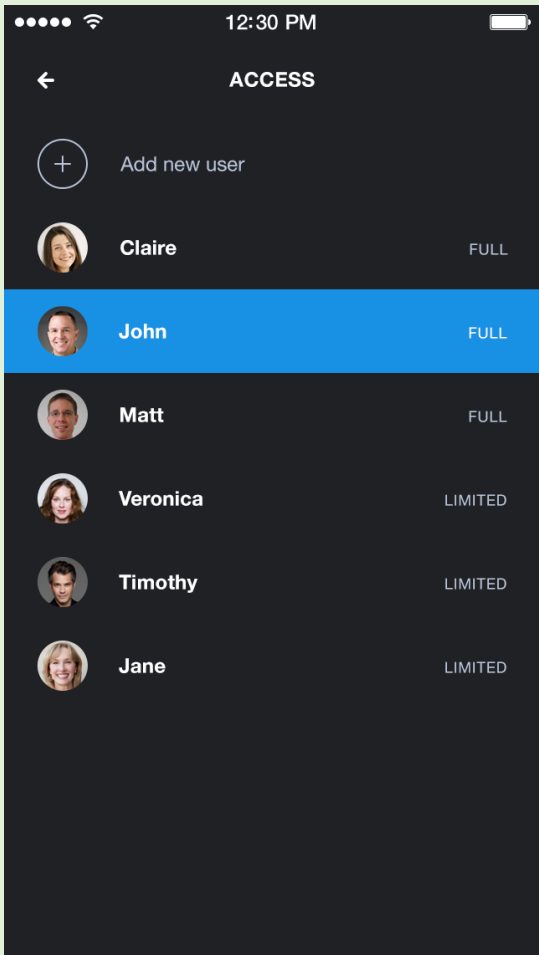

Once you receive and answer a call, you can mute or end the call.

Otherwise, you can reject the call, swiping left or swipe right and reveal the keypad to open the door.

Once the correct pin is entered, the open door button is enabled.

What else can the interface do?

- You can add additional users to be able to interact with BellBot
- You can stream the video from the device directly to your smartphone
- Either via Wi-Fi or via Bluetooth if you are not at home and your kids, your parents, your friends are calling and you want to let them in;

Thank you for your time.
